Vision Insurtech

Integrated platform for Financial Services

Vision Insurtech enabling any financial services company to design an end-to-end digital banking experience through a complete set of integrated features which serves as a full-service bank for customers to access all banking services.

Vision Insurtech unifies your business **aggregating in a coherent view data, people and processes** with modern, intelligent business applications that adapt to your changing needs, power by specific AI tools.

Implement and integrate your legacy system with Insurtech solutions, including everything from frontend system, CRM, reporting system to backend system and business processes.

Better align with shifting consumer behaviors and expectations leveraging employees modern way of work with agile and complex platform enabling easy build new application or integrate existing platforms and legacy systems into unified application.

Omnichannel

Services Integration and Unified Customer and Employee Experience

Services, Product Engine and Insurance Processes

Standard features for Financial Services Industry (Customers, Sales, Products, Operations)

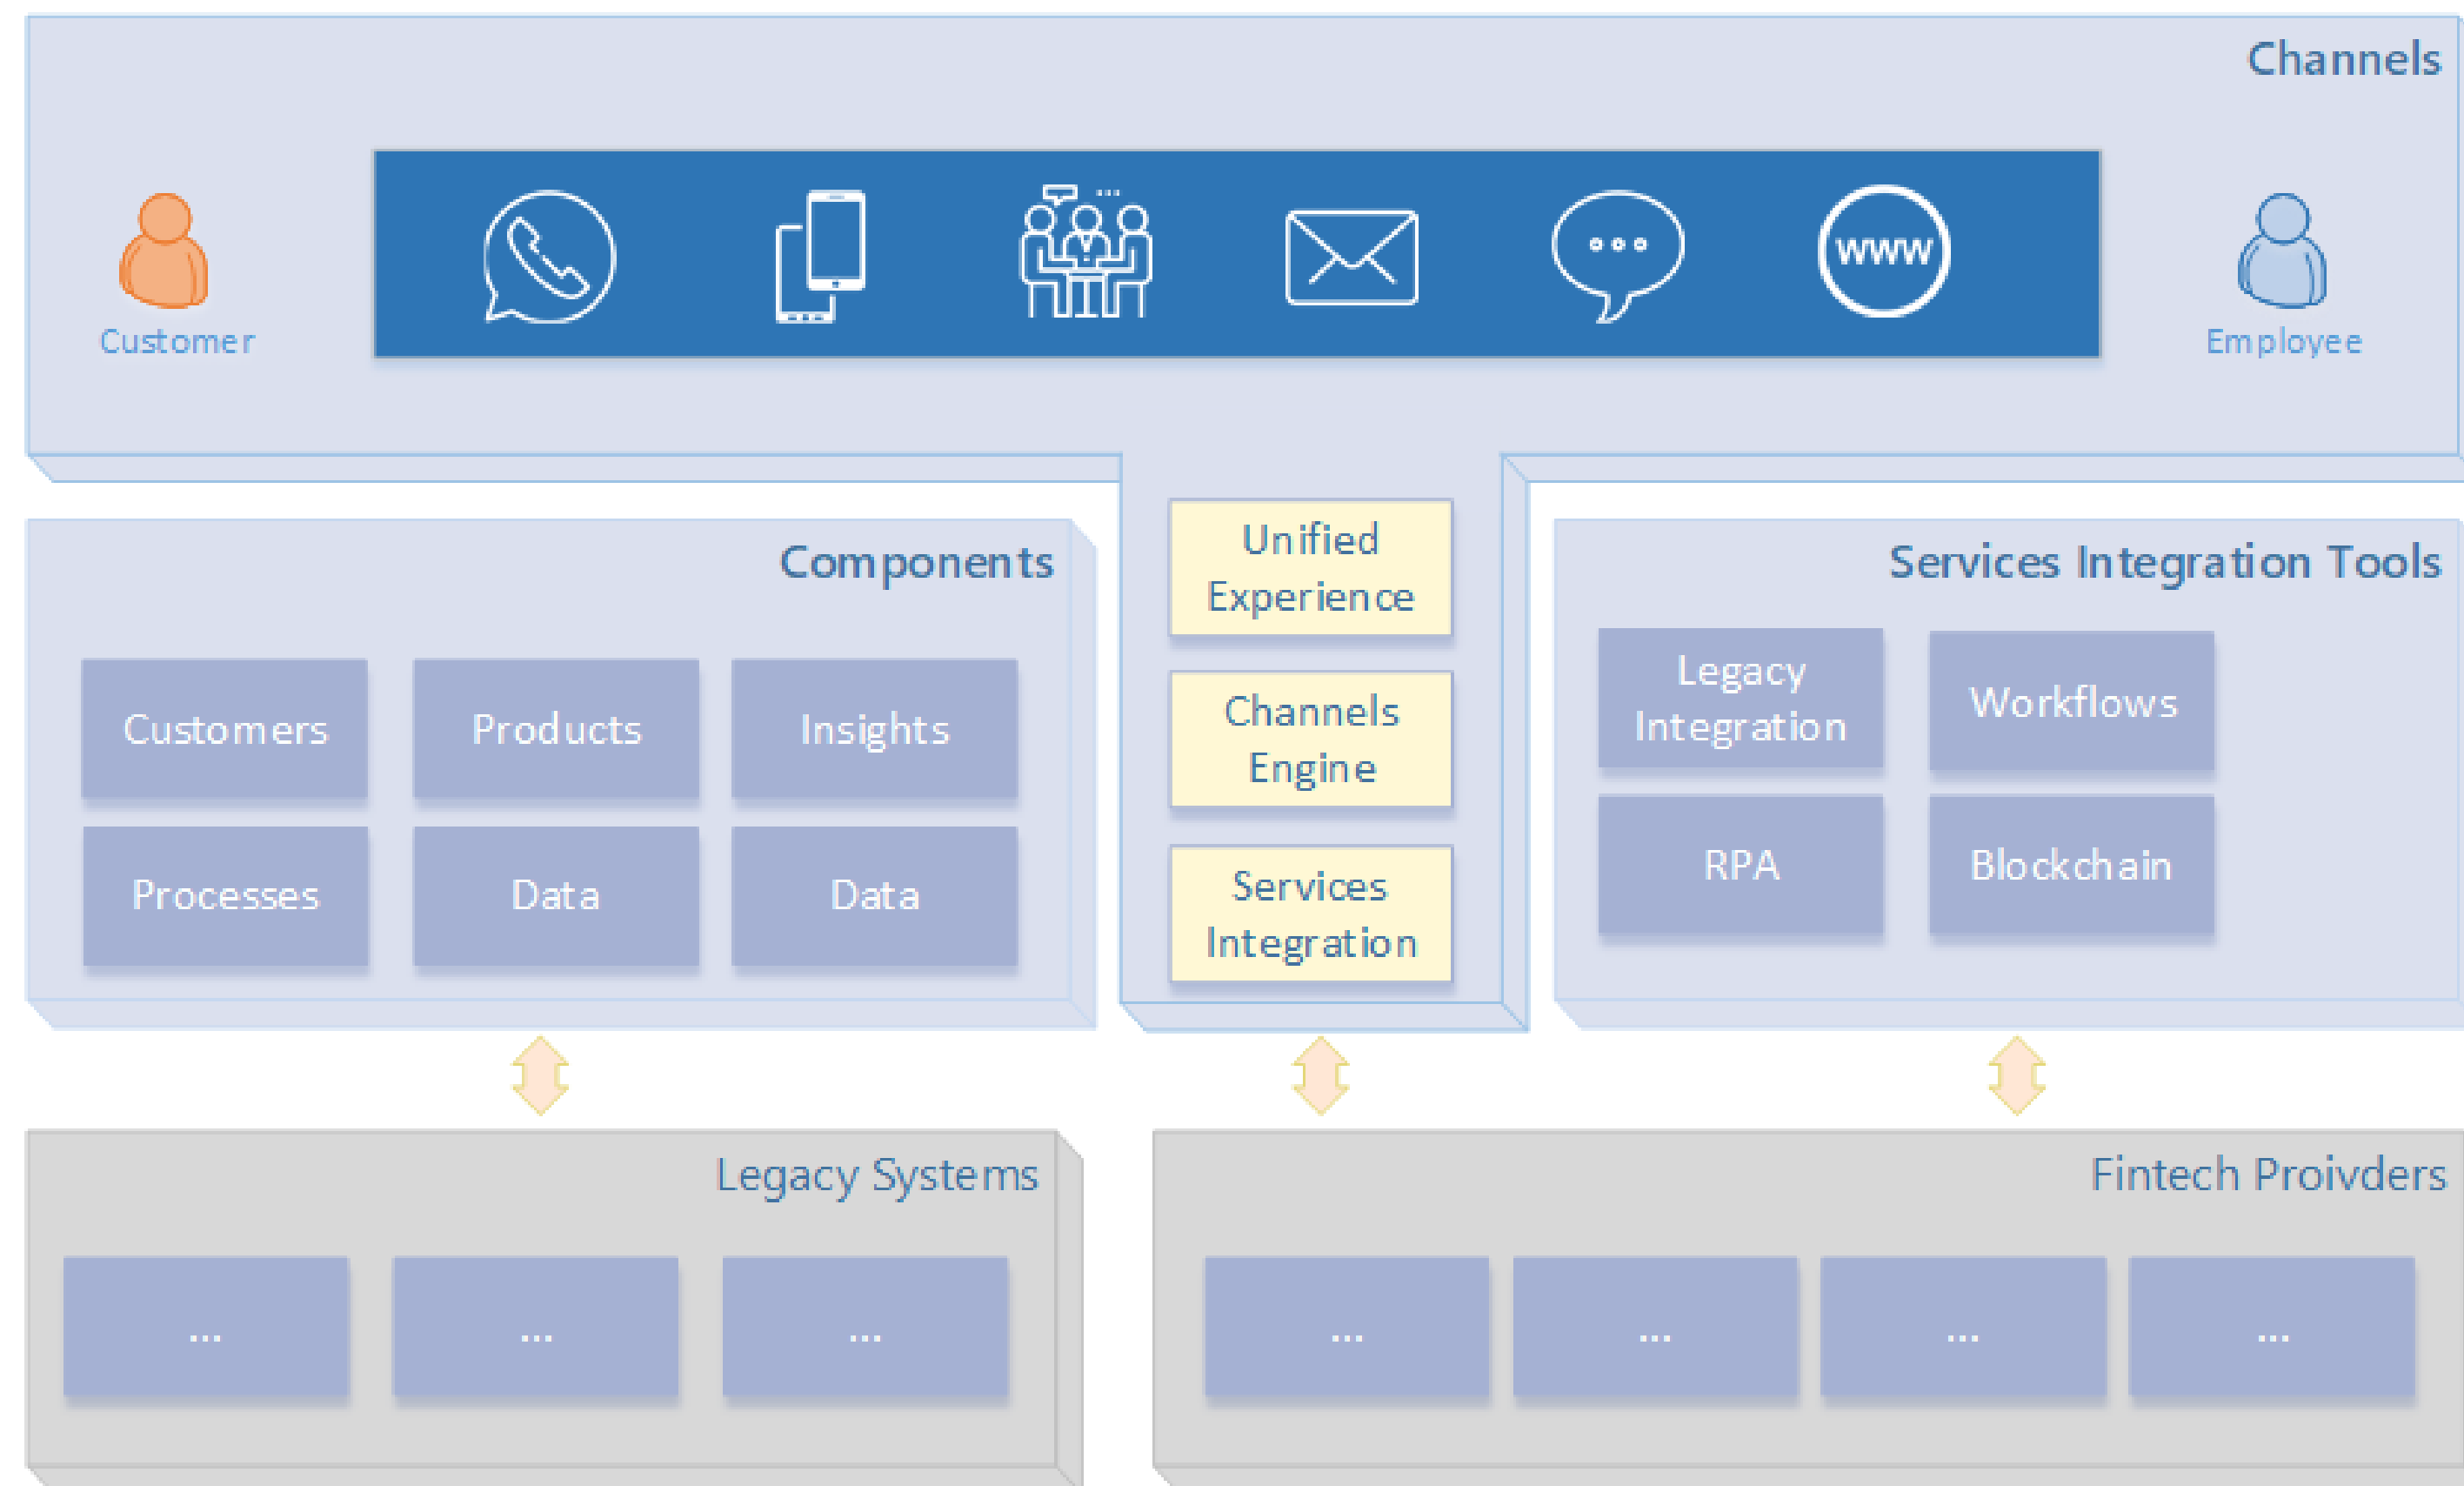

Integration Tools

Leverage the legacy systems with new and modern IT platforms and assure the transition toward digital banking

Vision Insurtech Platform

- Easy build new application from scratch
- Integrate existing platforms and legacy systems into unified application
- Digitalize your business workflows through business processes re-engineering
- Enhance Business-Integration Speed & Agility
- Optimize operations with processes prepared for rapid evolution
- Drive innovation by quickly creating innovative digital products and services
- Accelerates Transformation
- Simulate working software much earlier in the cycle enabling project team to iterative prototyping and agile development

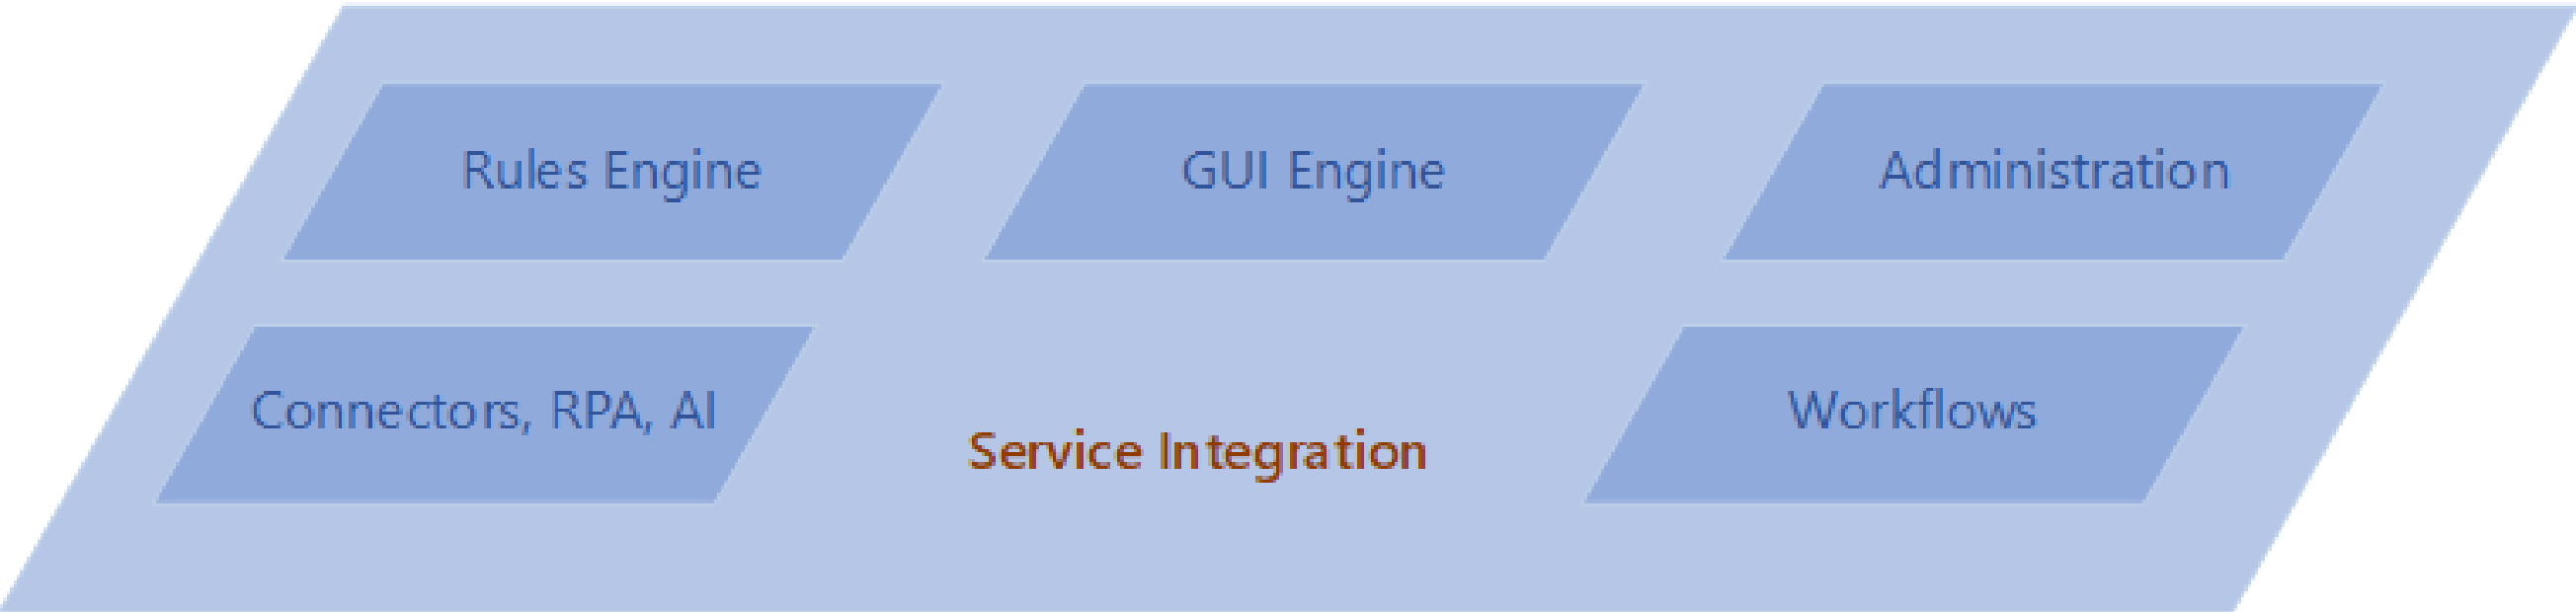

Vision Insurtech

Multilayered

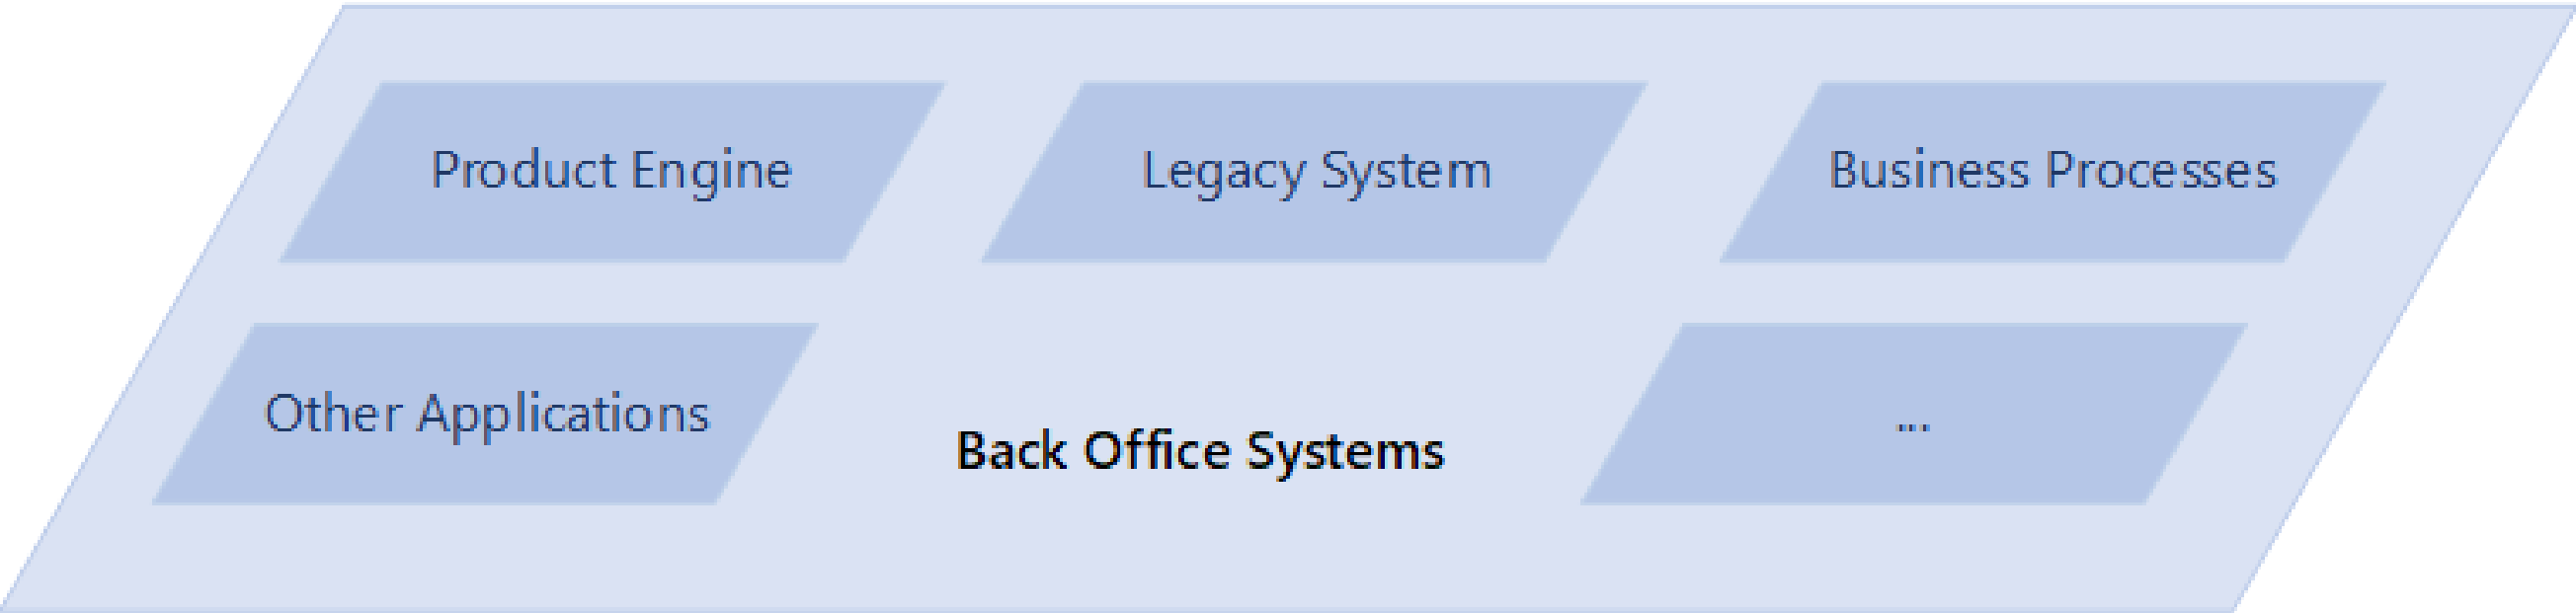

Support multichannel approach that allows anytime, anywhere, any device access with consistent experience across channels. Enable interactions across multiple customer touch points where intents are captured, insights are derived and conversations are personalized and optimized

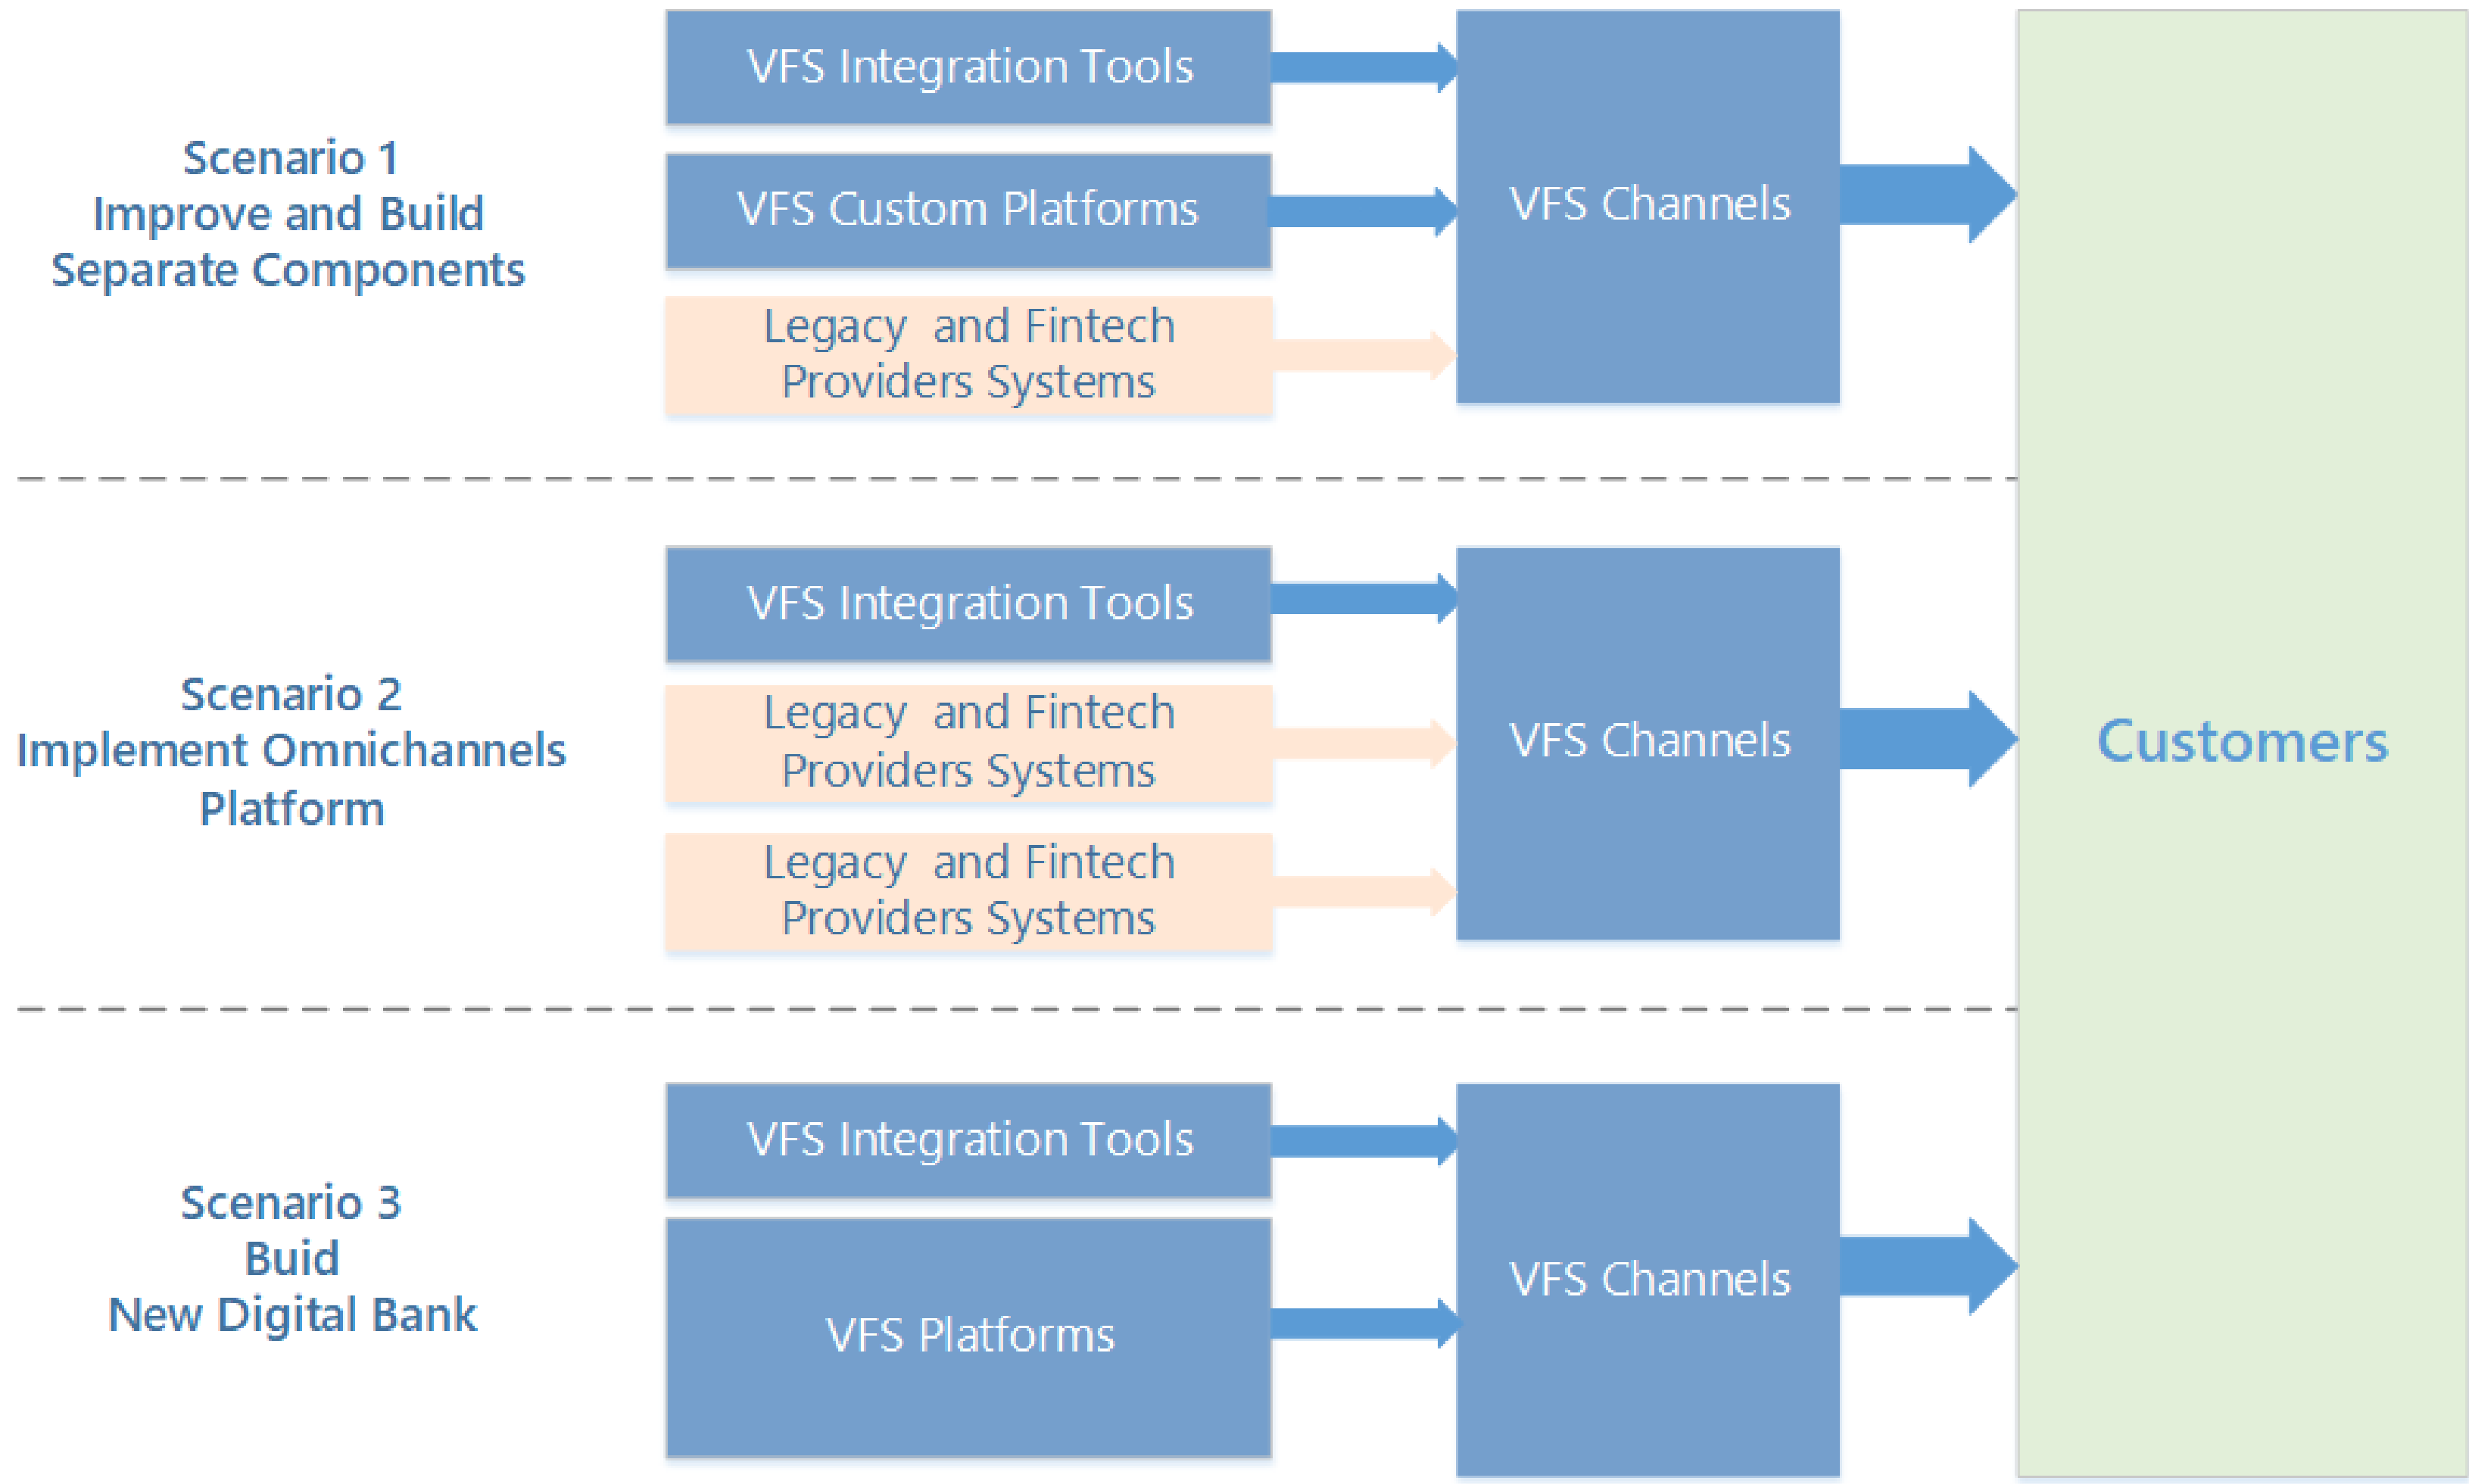

Achieving rapid, large-scale process automation by simplifying the process steps and procedural requirements at each stage—streamlining the information required from the customer and eliminating redundant verification steps—to reduce the complexity of the IT solution

Combine legacy systems with new, modern and flexible tools leveraging accumulated practices in using existing systems with flexibility and openness provided by new platforms.

Vision Insurtech Transition

Base your digital transformation on modern, flexible and complex platform including low-code development enablement capabilities, support for an omnichannel digital approach, robust business functionality that is reusable and scalable, enterprise notifications that are relevant and timely and the operational robustness to provide the right levels of security and scalability as customer growth occurs.

Omnichannel

- Portal and mobile components fully integrated with company systems
- Focus on improving customer relationships via 360 views across financial products.
- Digital Customer Onboarding (Online Shop), Account Opening & Product Origination
- Understand customer behavior across channels, optimize team and agent network performance
- Fully integrated with back-office systems and social media sites enabling full Omnichannel approach

Portal and Mobile components are based on modern technologies genuinely integrated with the main platform enabling agile and seamless services availability to the end customers and offering unified customer and employees experience.

Support multichannel approach that allows anytime, anywhere, any device access with consistent experience across channels. Enable interactions across multiple customer touch points where intents are captured, insights are derived and conversations are personalized and optimized.

Omnichannel Components

Sales Shop and Self Service Portal and Mobile Apps
Enable end customer to buy, access and administer the portfolio through intuitive and easy to use online tools.

Technology and Integration

Create complex applications in visual designer, with no code and high flexibility for further changes and customizations with Vision App Maker Platform.

Vision App Maker Suite

Build complex applications in visual designer, without code.

- Easy build new application from scratch
- Integrate existing platforms and legacy systems into unified application
- Digitalize your business workflows through business processes re-engineering
- Enhance Business-Integration Speed & Agility
- Optimize operations with processes prepared for rapid evolution
- Drive innovation by quickly creating innovative digital products and services
- Accelerates Transformation
- Simulate working software much earlier in the cycle enabling project team to iterative prototyping and agile development

Our customers are successfully rollout their daily operation on applications powered by Vision App Maker:

Aerotravel

SIGNAL IDUNA
Sănătate Viață Accident

Vision App Maker is a mature platform with 100+ implementations for various industries: Banking, Insurance, Automotive, Pharma, Services, Government, Distribution, Travel, Field Services.

Vision App Maker Suite

Features

Powerful Integration Capabilities

Allows integration with any system through a plugin mechanism. Data can be imported from ERP, CRM, DMS or legacy systems and can be further used in workflows, rules, interfaces and document templates.

Workflow Visual Editor

Flows can be simple or complex, from procurement approval to credit management or back-office solutions.

Document Generation

Design and generate document templates that can then be used in workflows to print any type of forms, like Quotes, Contracts or Invoices.

Omnichannel

Same user experience across all channels:
Internal Portal – External Portal – Mobile – Public API

Interface Visual Editor

Generate responsive UI accessible from any web browser or mobile device. Build Single Page Applications providing a fluid, desktop-like user experience.

- Modular, multi layered, decoupled architecture, enabling security segregation and high availability implementation
- Two factor and self registration authentication mechanism
- Identity and Access systems integration (ex. Active Directory)
- Plugins for various commercial systems (Microsoft CRM Dynamics, SharePoint, ERP, DMS, etc.)
- Persistent vs. Non-persistent data mechanism

Data Model Graphic Designer

Definition of simple and complex data types, cardinalities, lists, parameters and entities for any type of application.

Business Rules

Can be designed by any user who has the ability to write formulas in Excel. You can easily implement scoring, escalation and notifications or you can manage how information is displayed and processed in the interface, documents and reports.

Reporting and Alerts

Generate various types of alerts within workflows, from information transmitted by e-mail to reports generated by the system and exported in a predefined format.

Business Processes Automation Factory

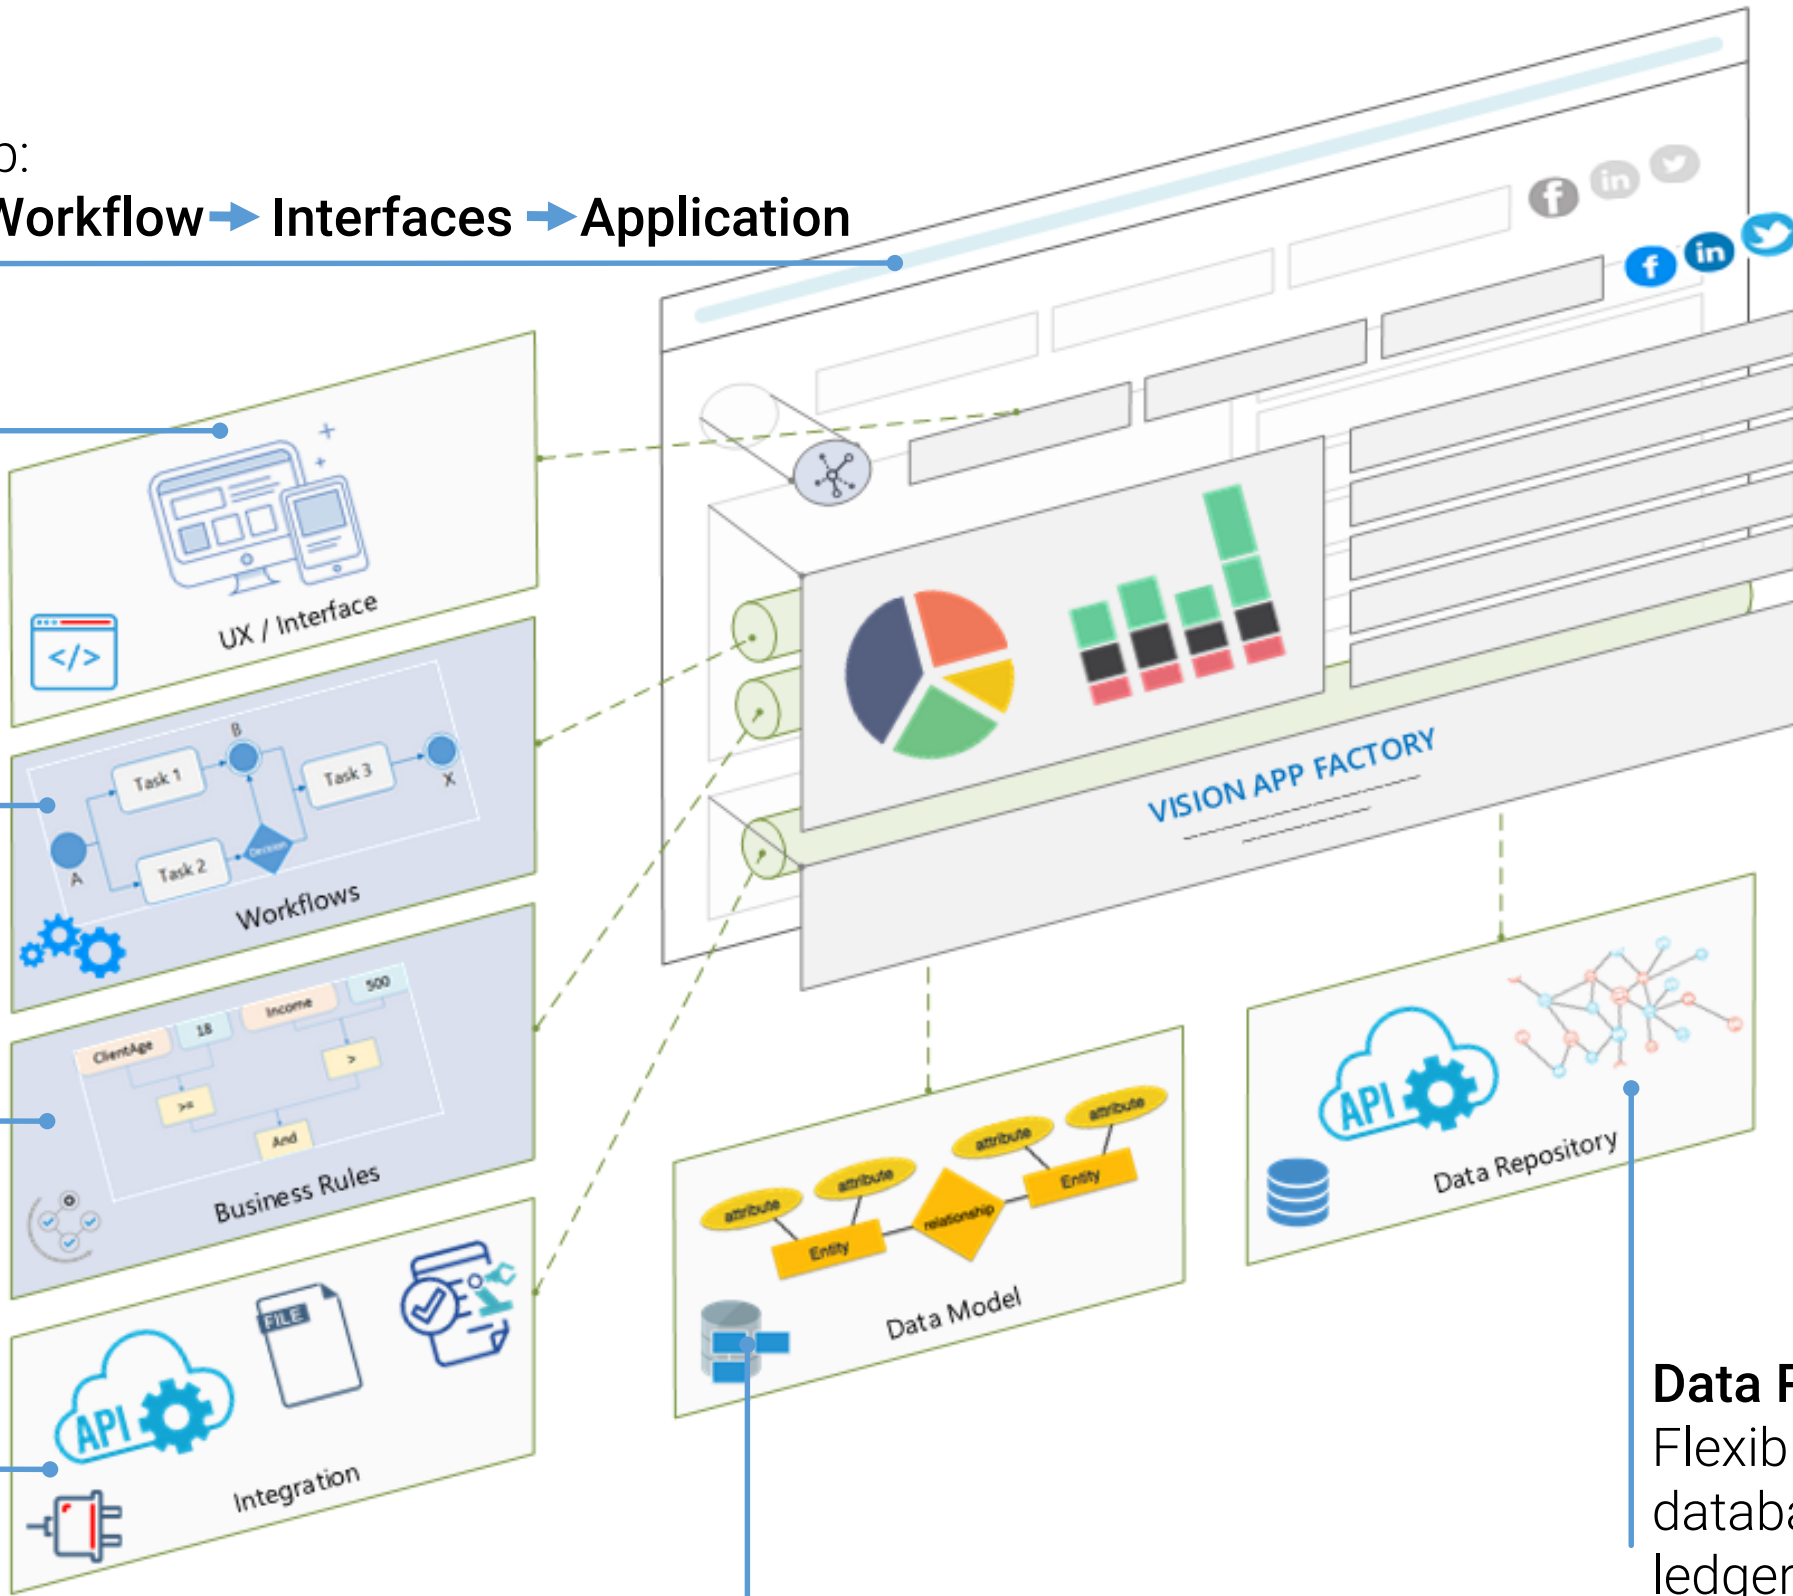

Build your application step by step:
Data model → Business rules → Workflow → Interfaces → Application

Interface Visual Editor
Drag and drop interface components and link them to your data, rules and workflows

Workflow Visual Editor
Drag and drop workflow components to model the business processes

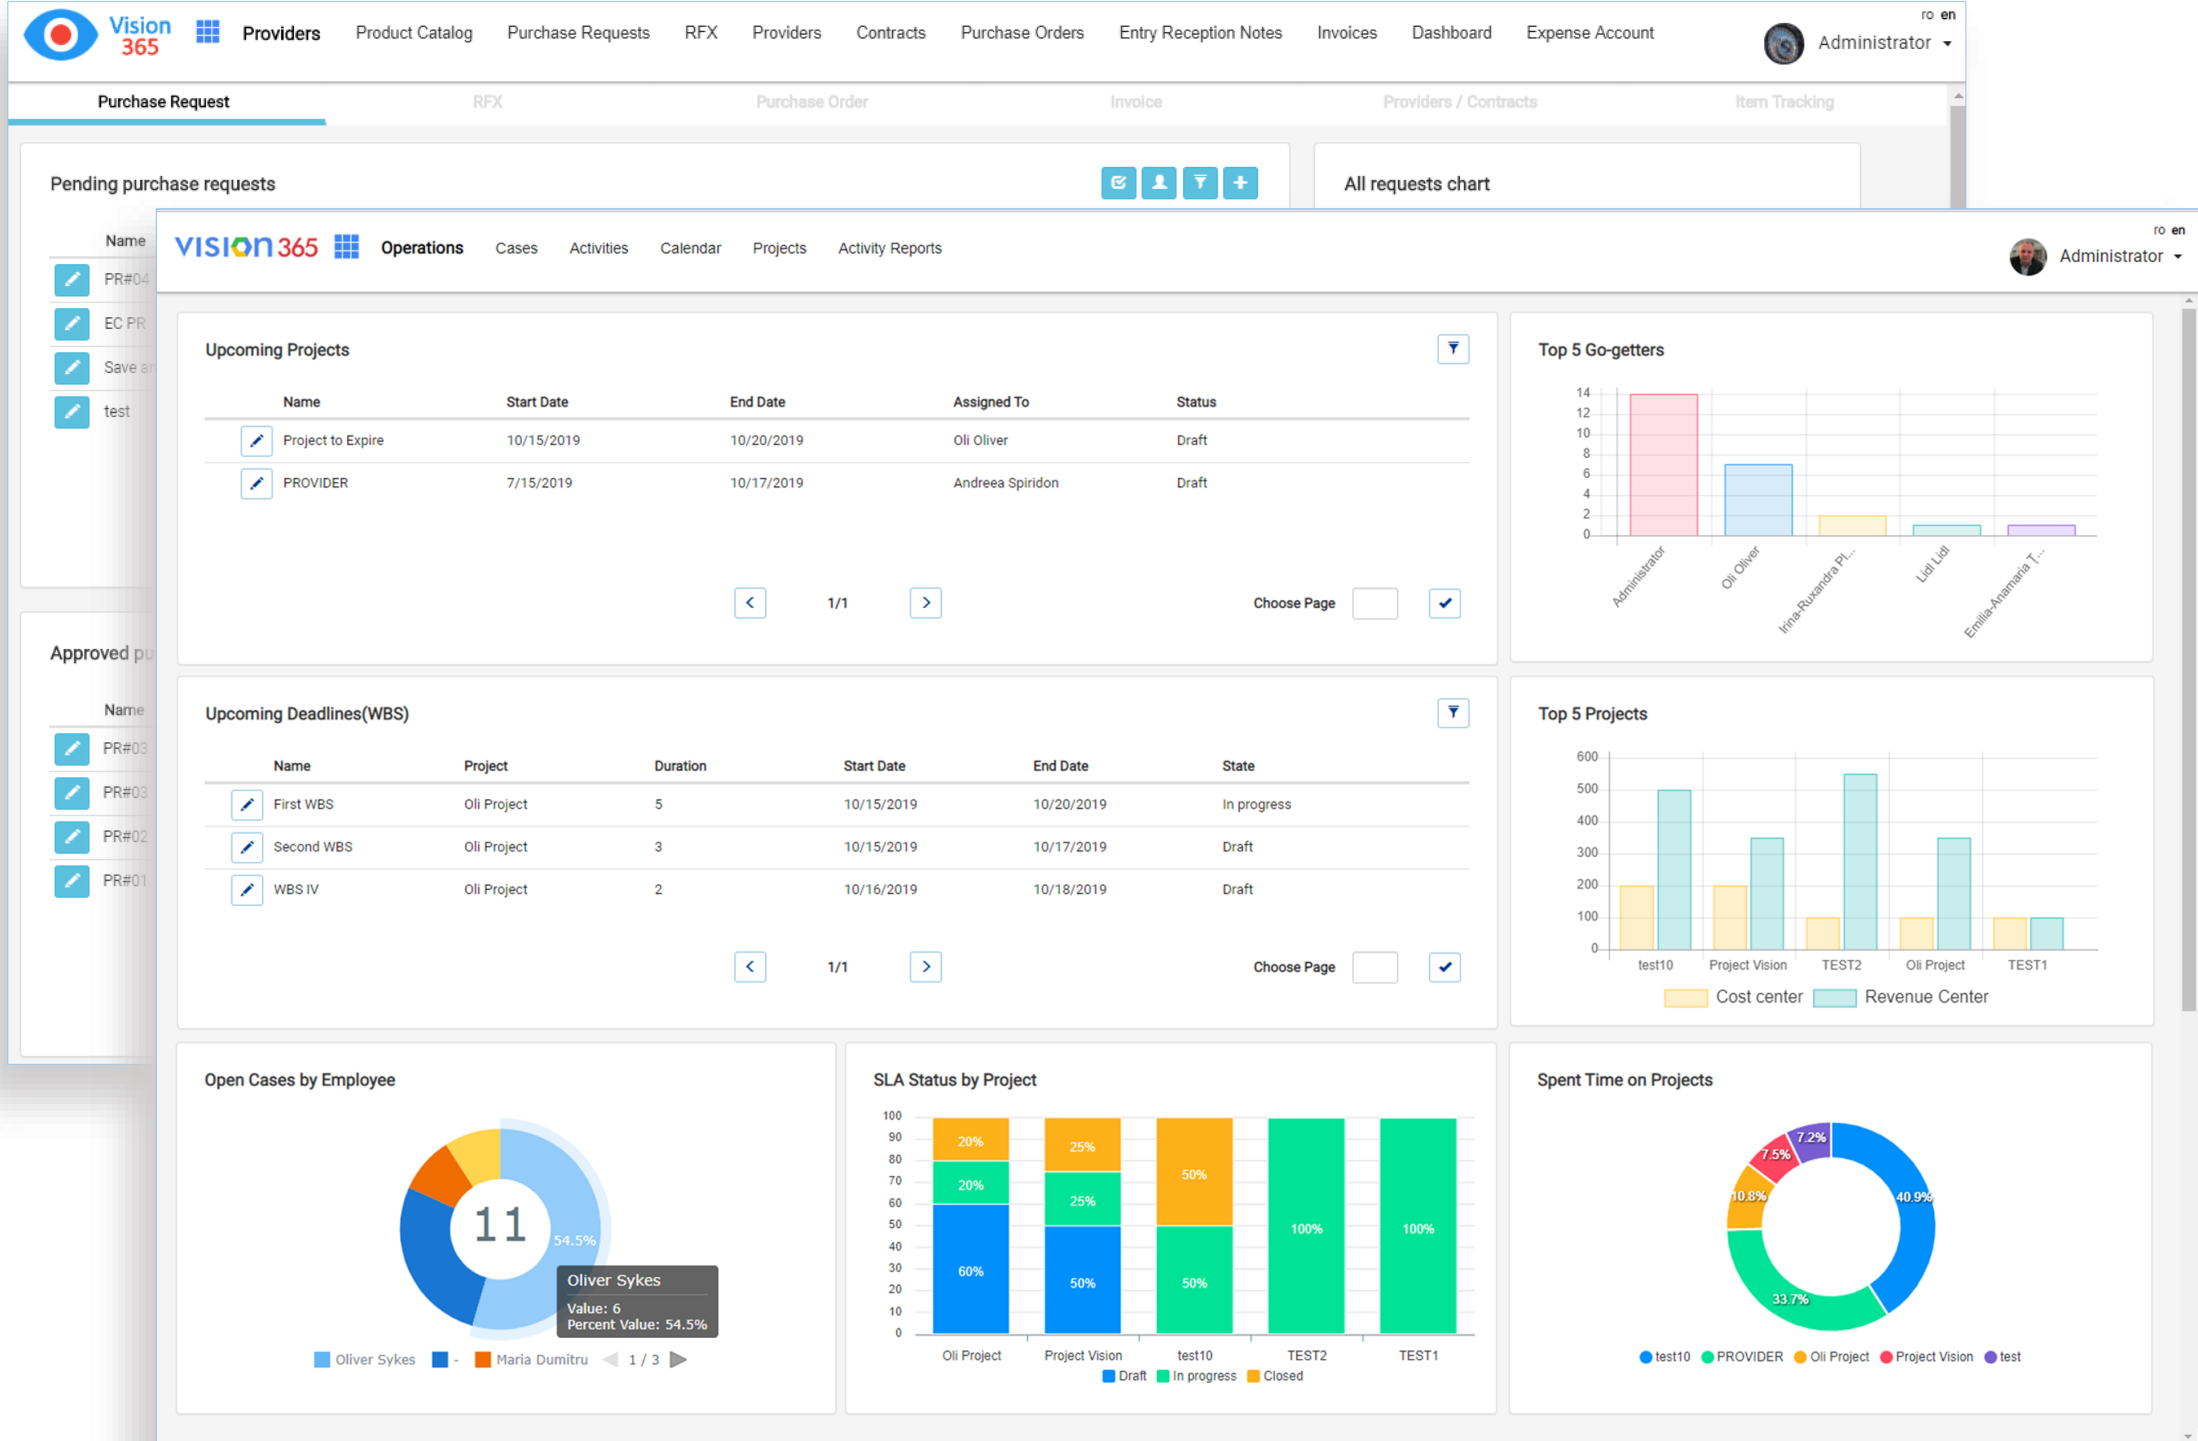

Business Rules
Easily implement complex business rules using simple functions

Powerful Integration Capabilities
Integrate your app with any API, Files or RPA

Data Model Graphic Designer
Graphic Data Modelling tool allowing you to create entities and entity relationship

Data Repository
Flexible data repository: local/cloud database or Blockchain digital ledger

Build your application in visual designer

Business Processes

Data Model 1

Define the data model for the data to be stored in the database for your application: create entities, cardinalities, relationship, etc.
The defined data model will be further used in building the application.

Business Rules 2

Translate your business rules into simple functions to be further used in the application interface, workflow, data and behavior. A business rule defines or constrains some aspect of business and always resolves to either true or false.

The Vision Rules Engine relies on complex operators, predefined functions (ex: check PIN, validate IBAN, etc.).

```
1 Eval(  
2     If(ActivityType = "Task",  
3         Eval(  
4             Assign(#association,  
5                 Create(OpsActivityAssociations,  
6                     Array(  
7                         Case,  
8                         InteractionId,  
9                         ReadEntity(OpsActivity, false, id = Case)  
10                    ),  
11                    activityId,  
12                    taskId,  
13  
14                SaveEntity(#association)  
15            ),  
16            If(ActivityType = "Call",  
17                Eval(  
18                    Assign(#association,  
19                        Create(OpsActivityAssociations,  
20                            Array(  
21                                Case,  
22                                InteractionId,  
23                                ReadEntity(OpsActivity, false, id = Case)  
24                            ),  
25                            activityId,  
26                            taskId,  
27  
28                        SaveEntity(#association)  
29                    )  
30                )  
31            )  
32        )  
33    )
```

The context menu titled "Operators" shows the following items:

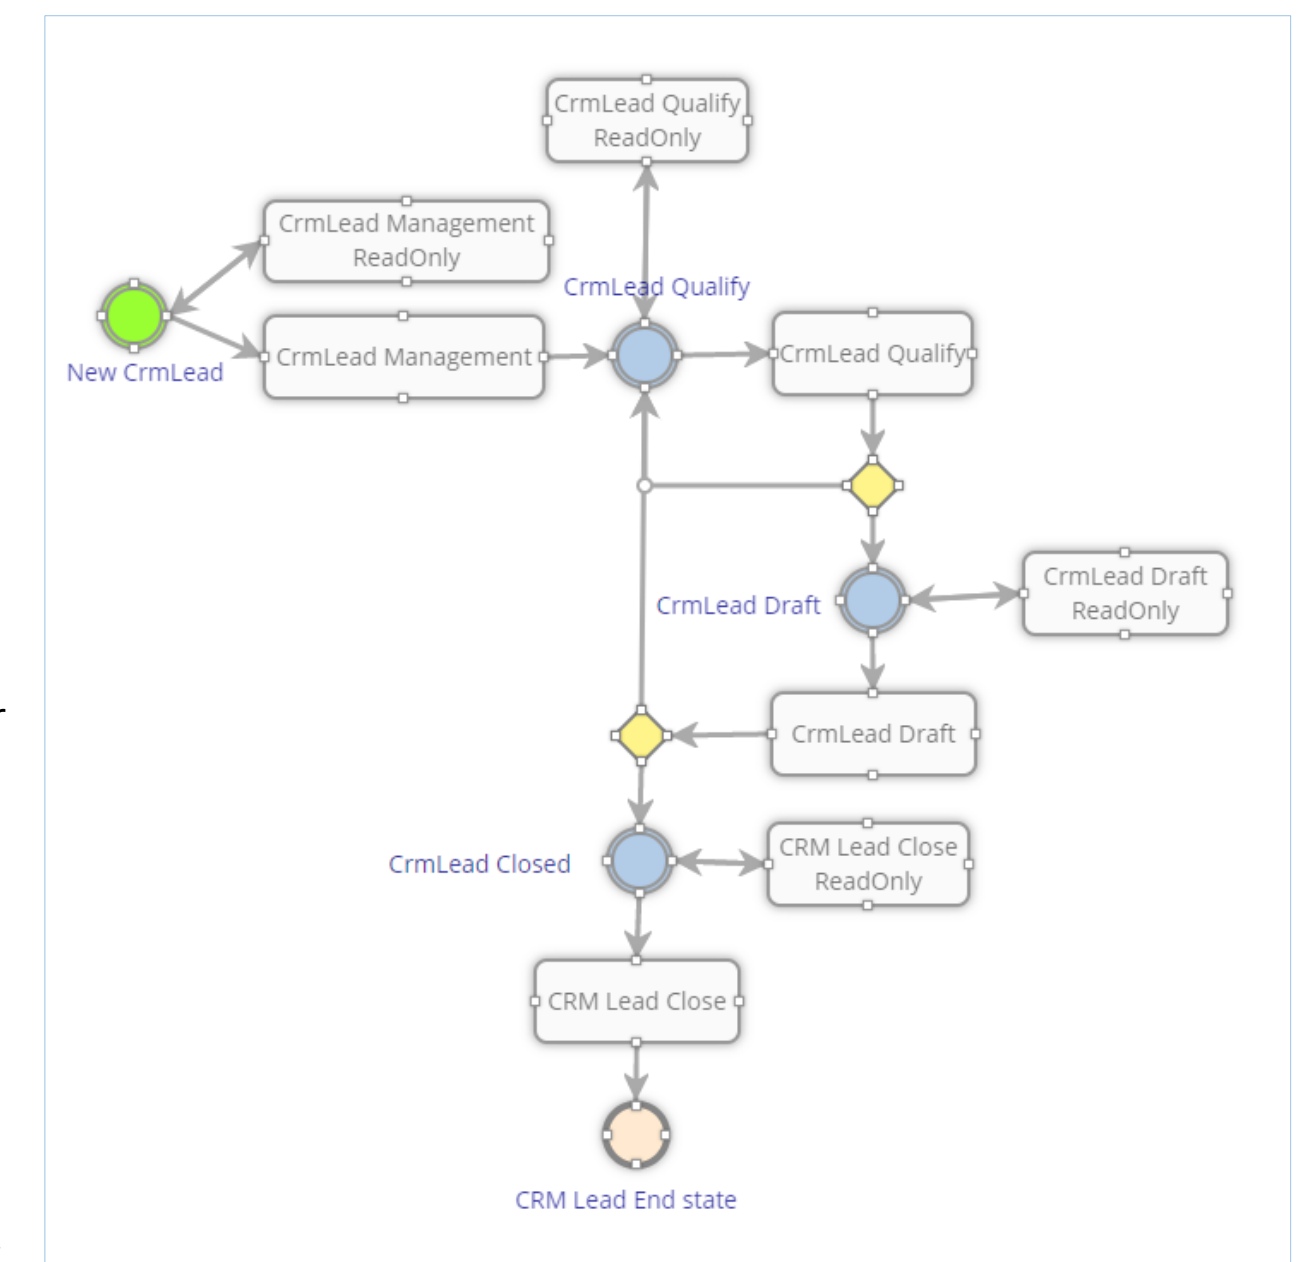

- CheckCUI**: Verifies the validity of a CUI. ex: CheckCUI("17875779") returns true. Is function: yes. Operands minimum:1 maximum:1.
- CheckIBAN**: Verifies the validity of an IBAN. ex: CheckIBAN("RO30INGB0000999900856881") returns true. Is function: yes. Operands minimum:1 maximum:1.
- SaveEntity**: Saves an entity.
- ReadEntity**: Reads an entity.
- WriteEntity**: Writes an entity.

Build User Interface 4

Using a visual editor that enables writing content directly inside of web page or online application, allowing to create complex user interfaces. The Visual Editor has features found in word processors such as styles formatting (bold, italic, underline, bulleted and numbered lists), tables, block quoting, web resource linking, safe undo function, image inserting, paste from Word and other common HTML formatting tools.

Design your workflow 3

Define the workflow states, activities and transitions. The visual design tool, intuitive and easy to use for assembling workflows, enabling you to easily create simple to advanced workflows with no code. Use drag-and-drop actions to add steps, configure behavior, business rules, access and user interfaces.

Use Case

Contract Configuration, Approval and Automatic Generation

Contract Content

Organize the contract content in chapters and subchapters in arborescent structure. Add statements to each chapter. Associate each statement to a Product Category, Client Segment and Action Type.

Dynamic Content

Define and use in contract dynamic content through parameters such as payments terms, contract duration, value, etc.

Structured Content

Associate each Chapter and statement for a specific document like Additional Annex or Main Contract.
